

Press release March 2007

- AUTOMOTIVE WIRING COMPONENTS FORUM 2007 -  
Munich / Germany  
21<sup>st</sup> to 24<sup>th</sup> June 2007

*How is environmental protection affecting eco-design of electrical and electronic products and recycling?*

*How are automotive components dealing with high speed data transmission?*

*What will be the impact of hybrid vehicles on wire harness development?*

These are just some of the wide variety of subjects to be covered at the 3<sup>rd</sup> Automotive Wiring Components Forum organised by **ACOME**, the automotive wire and cable specialist, in association with **tesa**, the producer of adhesive tapes for the automotive industry.

We are pleased to send you the attached event program where you will find full details of the more than 15 presentations.

**New : 2 workshops** will take place : one concerning *"hybrid vehicles and impact on wire harness development"*, the other one on *"future trends in bundling technology of wire harnesses"*.

This international forum is dedicated to automotive OEMs, harness manufacturers, wiring components experts, testing labs, specialised press, federations, ...
